## News Release - June 2009

### French success with UC-win/Road

The Paris based engineering software house **itech** announces its latest sale of the award winning 3D VR simulation system from Japanese software specialist Forum 8

**David Remaud** of **itech** ([www.itech-soft.com](http://www.itech-soft.com)) a **Forum 8 Premier Partner** based in Paris commented "We first came across Forum 8 when researching the market for 3D simulation software for engineering applications. We are a company that specializes in the design, development and distribution of structural computation software packages for use in the construction, civil engineering, roads and mechanical engineering sectors.

"We were approached by a huge manufacturing company here in France that wanted to utilize the Forum 8 3D Virtual Reality (VR) simulation software within their **Driver Training Simulator**.

"We will be revealing full details of this exciting new client very soon. However, what I can reveal is that they chose the Japanese software for a number of reasons, including its preeminence as the leading simulation software in the highly competitive Japanese and Korean markets and their experience with the Japanese Type N700 Shinkansen (**Bullet Train**) Simulator for training drivers and conductors.

"Apart from the comprehensive features of the software, they were also looking for a supplier that could guarantee a high level of technical support from both the software manufacturer as well as from its local Partner. I'm pleased to say that they found the combination of **itech, Forum 8 and UC-win/Road** to be the perfect solution."
